17 June 2019

TO : Deans/Directors/Department Chairs/Faculty/REPS

FROM : 
Armando C. Crisostomo, MD
Vice Chancellor for Research, UPM

SUBJECT : **ELRHA: R2HC 7th Call for Proposal**

We are pleased to announce that the Elrha Research for Health in Humanitarian crises is now accepting proposals that address specific or multiple public health issues by gathering evidence with the potential to contribute to improved public health outcomes in humanitarian contexts.

Attached is the 7th Call for proposals: Guideline for applicants for your reference. You can also visit <https://www.elrha.org/funding-opportunity/r2hc-annual-funding-call/> for more information.

The deadline for submission is on July 16, 2019 17:00 hrs BST.

For inquiries, kindly coordinate with the Research Grants Administration Office (rgao@post.upm.edu.ph, 567-2054)

Thank you for your continued interest in health research and development.

7th CALL FOR PROPOSALS: GUIDELINES FOR APPLICANTS

JUNE 2019

1. INTRODUCTION

- i. This document provides guidelines for applicants to the R2HC Seventh Call for Proposals, which opens for Expressions of Interest on Tuesday 4 June 2019 and closes on 16 July 2019 17:00 hrs BST.
- ii. It should be read in conjunction with other documents related to the call that are listed at the end of the document. Please consult these documents before reverting to the programme team with any questions.
- iii. This document covers the scope of funding; our approach to partnerships, ethics, eligibility criteria, and funding availability; and how to apply.

2. SCOPE OF FUNDING

- i. The scope of this call covers any research¹ that will strengthen the evidence base around public health interventions, and thereby lead to more effective public health interventions in humanitarian crises.²
- ii. "Humanitarian crises" for the purpose of the programme includes natural disasters, conflicts, or complex emergencies, either at the regional, national or sub-national levels, within lower or middle income countries.
- iii. Research concerned with health outcomes in the acute phase³ of an existing humanitarian crisis is prioritised. Proposals focusing on resilience/disaster risk reduction or early recovery will be considered where a clear link is made with health outcomes in an acute phase.
- iv. Proposals under the Call could fund research that addresses:
 - public health priorities specific to the context of a humanitarian crisis that lacks a solid existing evidence base;
 - how public health interventions not specific to a humanitarian context can be adapted and delivered, and their effectiveness maximised, in a humanitarian context;
 - health systems, including coordination of the public health response in humanitarian contexts and health system strengthening in conflict-affected countries;

¹ By research Elrha refers to a methodical study that will prove a hypothesis or answer a specific question. The research must be systematic and follow a series of steps and a rigid standard protocol.

² In 2013 Elrha commissioned a Humanitarian Health Evidence Review to undertake a systematic review of the existing evidence on public health interventions in humanitarian crises. The final report is available on the [R2HC website](#). Applicants will need to position their applications in the context of the existing evidence, are encouraged to undertake their own literature review, and to use the review findings for this purpose.

³ An acute or emergency phase can exist within a chronic, slow onset or sudden onset situation. It may be defined by a) a Declaration of Disaster, which is an official in-country issuance of a state of emergency upon the occurrence of a large-scale calamity; b) a declaration of a L2 or L3 emergency by the Inter-Agency Standing Committee or an individual humanitarian agency; or c) the well-supported, evidence-based argument of the institution that applies for R2HC funding.

- specific interventions designed to improve health outcomes, such as cash transfers.
- v. Proposals may focus on specific, or multiple public health issues, gathering data or evidence with the potential to contribute to improved public health outcomes in humanitarian contexts.
- vi. Proposals must include a partnership between at least one academic or research institution and one operational humanitarian partner. Either body can be the lead organisation for the application. Under Call 7, we have an additional requirement, that the research consortium must include at least one academic or research institution from the country(s) or region(s) in which you plan to undertake research.
- vii. Research proposals are required to demonstrate how gender equality and social inclusion will be addressed through the research process and, also, how the research outcomes will contribute to increased gender equality and social inclusion during humanitarian crises.
- viii. Proposals that focus on addressing public health issues specifically affecting vulnerable and marginalised populations, such as people with disabilities, the elderly, women and girls, and hard-to-reach groups, will be welcomed. Proposals should consider how vulnerable and marginalised groups access health services and are integrated into the planning of service provision.
- ix. The potential scale of impact of funded research is an important criteria and we therefore strongly encourage applications that focus on:
 - comparative (multi-country) research
 - research that is replicable in multiple contexts
 - multi-sector integrated responses
 - inclusion of cost-effectiveness analyses (where appropriate).
- x. Proposed research methodologies should be of a standard such that final papers will be publishable in peer-reviewed academic journals. Robust innovative methodologies that advance research in humanitarian settings are encouraged. Primary and/or secondary data collection approaches will be considered.
- xi. Research proposals may focus on any of the various humanitarian crisis settings, whether urban or rural, camp or general population.

3. PARTNERSHIPS

- i. Applicants must have a research team including both a research institution and an operational humanitarian organisation. This requirement fulfils the R2HC objectives of supporting partnerships between academics and practitioners, and ensuring that funded research is based both on rigorous research methodology and operational experience.
- ii. Collaboration between northern and southern research institutions and researchers is strongly encouraged. The research consortium must include at least one academic or research institution from the country(s) or region(s) in which you plan to undertake research.

4. RESEARCH IMPACT

- i. Applicants must outline in their full proposals how they plan to influence humanitarian policy and practice using their research findings. An identified focal point for research uptake activities should be identified within the research team. This individual(s) must have relevant skills, knowledge and experience to be able to develop and deliver a plan for the research findings to influence change in policy and practice within the humanitarian sector. Please refer to the [R2HC Research Uptake Guidance Note](#) for further information.

5. ETHICS

- i. The ethical challenges of conducting public health research in crisis settings and alongside operational humanitarian programmes will be a major consideration for applicants.
- ii. To help applicants ensure the ethical viability of their proposals, and to support the ethical review of proposals by IRB and other review boards, the R2HC commissioned an Ethical Framework and Tool for health research in humanitarian crises. The Framework is available [here](#) and the Tool can be accessed [here](#).
- iii. The Framework emphasises the importance of consultation and engagement with crisis-affected communities at all stages of the research. Local communities' interest in engaging with the research, the perceived benefits and risks of the research, and how these will be shared or mitigated are all important considerations when research proposals are being designed. All applicants are encouraged to use the Tool.
- iv. Successful applicants will be expected to acquire ethical approval for their research from their organisation or institution. They will also be expected to receive approval from ethical review boards in each country that they will be conducting research.
- v. Further details on ethical considerations will be required for shortlisted applicants invited to submit a Full Proposal.

6. ELIGIBILITY CRITERIA

- i. It is expected that applications will be developed and submitted by an institution/organisation representing a research partnership appropriate to the proposed field of study. Research teams could include a variety of organisations (such as research institutions, operational organisations, governmental organisations, individual experts, and local non-governmental or community based organisations). Please note that R2HC research teams must include both a research institution and an operational humanitarian organisation.
- ii. The lead applicant may not be a profit-seeking enterprise or an individual (although these may form part of the research team).

For those proposals that progress beyond the Expression of Interest stage, further documentation and information will be needed in order to conduct due diligence checks if you are to be successful at Full Proposal stage. Please review the Due Diligence and Contracting FAQ's for this information.

7. FUNDING AVAILABLE

- i. The R2HC is able to fund a wide range of grant sizes, including grants for large comparative studies that have the potential to generate significant impact. There is no ceiling on the amount that can be requested. The number of grants and the total amount of funding approved will depend on the quality of proposals received. Final grant awards are subject to confirmation of funding from R2HC's strategic partners.
- ii. Grants will be for a maximum duration of 48 months, during which both research and research uptake activities should both take place.
- iii. For those applicants selected to go forward to the Full Proposal stage, seed funding of up to £10,000 per application will be available to support the development of strong research partnerships and to finalise proposal development. In exceptional cases seed funding can be used to undertake preliminary data collection as part of the proposal development process. Applicants will be invited at the Expression of Interest stage of the application to indicate whether they want to apply for seed funding.

8. HOW TO APPLY

- i. There will be a two-stage selection process for the R2HC 7th Call for Proposals: an initial Expression of Interest stage, and a subsequent Full Proposal stage for shortlisted applicants.
- ii. Expressions of Interest should be submitted through the online Common Grant Application system. Requested information includes a summary of the research proposal, preliminary details of the research consortium, and an outline budget. Applicants will need to register for the system before proceeding with applications. A link to the application, where full instructions are provided, is available on the R2HC website.
- iii. Expressions of Interest must be submitted online by 17:00 hrs BST on 16 July 2019. Expressions of Interest will be screened for eligibility by the Elrha Secretariat and reviewed by the R2HC's independent, expert Funding Committee. A shortlist of applicants will be invited to progress to the Full Proposals stage by the end of September 2019.
- iv. The deadline for the submission of Full Proposals will be 20th December 2019. Full Proposals will be reviewed by technical experts and the R2HC Funding Committee in January 2020 to February 2020.
- v. A rebuttal phase will take place in January 2020 after the technical reviews. This will provide applicants with an opportunity to respond briefly to comments made by the technical reviewers before the Funding Committee reviews are conducted.
- vi. We aim to communicate Funding Committee decisions to those who have submitted Full Proposals by the end of March 2020.
